| Maximum Marks | 4 Marks                                                                           |

## Project Overview:

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Description: Automates standard laptop procurement in Flow Designer. Employee and job-role requirements are validated, an approved standard laptop configuration is recommended, a procurement request is generated, and non-standard requirements are routed to an approval workflow.

Project Version: 1.0

Testing Period: 22 September 2026 to 30 September 2026

## Testing Scope:

Features: employee/job-role and budget validation; standard laptop configuration (CPU, RAM, storage, GPU) and required software selection; automated laptop recommendation; procurement request generation; non-standard requirement detection; exception handling and approval workflow.

User Stories / Requirements: A requester can submit a laptop request and receive an approved standard configuration; a non-standard request is detected and sent for approval; an approver can approve or reject an exception; a procurement request is generated without manual effort.

## Testing Environment:

URL/Location: Flow Designer test instance used by the project team

Credentials (if required): Test requester and approver accounts provided by the team

**Test Cases:**

| Test Case ID | Test Scenario                                                         | Test Steps                                                                                                            | Expected Result                                                                    | Actual Result                                                       | Pass/Fail |
|--------------|-----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|---------------------------------------------------------------------|-----------|
| TC-001       | Submit a laptop request with valid job role and standard requirements | 1. Open the laptop request form<br>2. Select job role and enter requirements within budget<br>3. Submit the request   | Matching approved standard laptop configuration is recommended                     | Matching approved standard configuration recommended as expected    | Pass      |
| TC-002       | Detect non-standard requirements                                      | 1. Open the laptop request form<br>2. Enter CPU/RAM/storage/GPU beyond the approved standard<br>3. Submit the request | Request is flagged as non-standard and routed to the approval workflow             | Request flagged as non-standard and routed to the approval workflow | Pass      |
| TC-003       | Validate budget constraint                                            | 1. Open the laptop request form<br>2. Enter a budget outside the permitted range<br>3. Submit the request             | Validation error or non-standard flag is shown for the budget                      | Out-of-range budget flagged with a validation message               | Pass      |
| TC-004       | Generate procurement request                                          | 1. Submit a valid standard request<br>2. Open the generated procurement request<br>3. Verify the details              | Procurement request is created automatically with correct details                  | Procurement request created automatically with correct details      | Pass      |
| TC-005       | Approve or reject an exception request                                | 1. Open a flagged non-standard request as approver<br>2. Approve or reject the request<br>3. Check the request status | Request proceeds or closes according to the decision and the requester is notified | Request approved/rejected as per decision; requester notified       | Pass      |
| TC-006       | Verify required software for the job role                             | 1. Select a job role in the request form<br>2. Review the software list<br>3. Submit the request                      | Required software for the selected job role is included in the request             | Required software for the job role included in the request          | Pass      |

**Bug Tracking:**

| Bug ID | Bug Description                                               | Steps to reproduce                                                                                      | Severity | Status | Additional feedback                                           |
|--------|---------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|----------|--------|---------------------------------------------------------------|
| BG-001 | Budget field accepted a negative value                        | 1. Open the laptop request form<br>2. Enter a negative budget<br>3. Submit the request                  | Medium   | Closed | Fixed by adding a budget range check; re-tested and passed    |
| BG-002 | A request with a higher GPU than the standard was not flagged | 1. Open the laptop request form<br>2. Select a GPU above the approved standard<br>3. Submit the request | High     | Closed | Non-standard condition branch corrected; re-tested and passed |
| BG-003 | Approval notification did not show the requester name         | 1. Submit a non-standard request<br>2. Open the approval notification<br>3. Check the requester name    | Low      | Closed | Notification template updated; re-tested and passed           |

**Sign-off:**

Tester Name: Rithish Nathan A

Date: 30 September 2026

**Notes:**

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
