

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	02 October 2026
Team ID	SWTID-2026-4912
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Requirement Submission	Submit a laptop request by entering the employee's job role Enter the software required for the role Enter the budget limit for the laptop
FR-2	Requirement Validation	Check that the request details are complete and valid Detect requirements that differ from the approved standard (non-standard requirements)
FR-3	Laptop Recommendation	Match job role, required software and budget with approved standard laptop configurations (CPU, RAM, storage and GPU) Display the recommended configuration to the employee Employee confirms the recommended configuration
FR-4	Procurement Request Generation	Automatically generate a procurement request from the confirmed configuration Send the procurement request to the IT procurement team
FR-5	Exception Handling & Approval	Route non-standard requirements to the manager / approver Approve or reject an exception request with a comment Notify the employee and IT procurement team of the decision
FR-6	Request Tracking	View the status of a laptop request Receive notifications when the request status changes

FR-7	Standards Management	Create and update job role requirement profiles Add, edit or retire approved laptop configurations View the history of exception requests and decisions
------	----------------------	---

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The request form should be simple and guided, with a job role list and clear messages, so employees can raise a laptop request without help from IT.
NFR-2	Security	Access should be based on user roles (employee, manager / approver, IT procurement officer, administrator). Only authorised users can approve exceptions or change standard configurations, and request and approval records must be protected.
NFR-3	Reliability	Requests, validations and approvals should be processed consistently, so that no request is lost and the same inputs always give the same recommendation. Failures should be reported and recoverable.
NFR-4	Performance	Validation and recommendation should be returned promptly after submission, and the procurement request should be generated automatically without manual steps.
NFR-5	Availability	The request and approval process should be accessible to employees, approvers and procurement staff whenever it is needed, with minimal downtime.
NFR-6	Scalability	The solution should handle a growing number of requests, job roles and laptop configurations without redesigning the process; new roles and configurations should be added by the administrator.
