

1. CUSTOMER SEGMENT(S)**CS**

- Employees who request a standard laptop, grouped by job role
- IT procurement team who validate requests and raise orders
- Managers / budget owners who approve exceptions

6. CUSTOMER CONSTRAINTS**CC**

- Fixed budget limit for each job role
- Only approved standard configurations can be ordered
- Requesters may not know the right CPU, RAM, storage or GPU
- Required software must be supported on the chosen laptop
- Non-standard needs require approval

5. AVAILABLE SOLUTIONS**AS**

- Email, spreadsheet or form-based laptop requests handled manually
- Pros: familiar, flexible
- Cons: slow, inconsistent, error-prone, repeated follow-ups and no automatic check against standards

2. JOBS-TO-BE-DONE / PROBLEMS**J&P**

- Employee gets the right standard laptop for their role without needing to know technical specifications
- IT team validates each requirement against approved configurations and budget, and raises a correct procurement request
- Approvers review only the exceptions

9. PROBLEM ROOT CAUSE**RC**

- Requirements are collected manually and in unstructured form
- No automatic mapping from job role to a standard configuration
- Non-standard requirements are not detected early
- Result: repeated manual checks, rework and delays

7. BEHAVIOUR**BE**

- Employees submit requests and describe specifications in different ways
- IT staff manually compare requests with standards and budgets, ask for clarification and chase approvals
- Orders are raised by hand from the collected details

3. TRIGGERS**TR**

- New employee onboarding
- Laptop replacement or refresh cycle
- Change of job role or need for specialised software / hardware

4. EMOTIONS: BEFORE / AFTER**EM**

- Before: unsure which specifications to pick, frustrated by waiting, unclear request status
- After: confident with a clear recommendation, faster delivery, transparent approvals

10. YOUR SOLUTION**SL**

- Flow Designer workflow that automates standard laptop orders:
- Employee provides job role and requirements
- Requirements validated against standards (CPU, RAM, storage, GPU, software, budget)
- Approved standard configuration recommended automatically
- Procurement request generated automatically
- Non-standard requirements detected and routed through an exception approval workflow

8. CHANNELS of BEHAVIOUR**CH****8.1 ONLINE**

- Online request form and workflow in Flow Designer
- Automated email / notification updates for status and approvals

8.2 OFFLINE

- Direct discussion with the IT team or manager for special or exceptional requirements
